## Introduction

Associated Students' Transportation Solutions (TS) completed its annual student survey, administered for two weeks during the fall 2022 semester. The fall 22' survey was an online survey conducted through Qualtrics and was open from October 31st through November 11th. The survey link was sent via email through Constant Contact to 36,598 students. A total of 2,147 students participated in the 2022 survey, for a response rate of 5.9%, versus 3,054 students in 2021, a response rate of 8%.

This survey is broken down into various categories, with the multiple points of data available. The categories include student classification, on-campus student responses, commute data, transportation choices and mode changes, Transportation Solutions' department effectiveness and student demographics. The visual graphics and supplemental tables represent represents choice totals. If a question was asked in 2021, and again in 2022, a second data table provides the percentage change between the years. For some questions such as primary and secondary commutes, and transit routes, some variation or inclusions of answers were not offered in 2021. The choice options were expanded to include a variety of data and commute options.
