

San José State University
School/Department
Computer Science 265: Cryptography and Computer Security, Fall 2022

Course and Contact Information

Instructor:	Auston Davis
Office Location:	MacQuarrie Hall 217
Telephone:	408-832-5448
Email:	auston.davis@sjsu.edu (preferred)
Office Hours:	Wednesdays 2:30pm – 3:15pm (Zoom online only)
Class Days/Time:	Mon/Wed 6:00 – 7:15pm
Classroom:	Live Online
Prerequisites:	CS149 or instructor consent

Course Format

This is a hybrid classroom lecture type format. Students will be required to use a functional laptop with a working camera and audio to all live online sessions, quizzes, the midterm and final. Each week there will be Live Online Class and on occasion a Pre-Recorded lecture. It is the student's responsibility to ensure their network connectivity, camera and audio are functional during live online class sessions. Students are highly encouraged to attend the Live Online class sessions.

Canvas

Course materials such as syllabus, handouts, notes, assignment instructions, etc. can be found on the [Canvas Learning Management System course login website](http://sjsu.instructure.com) at <http://sjsu.instructure.com>. You are responsible for regularly checking with the messaging system through [MySJSU](http://my.sjsu.edu) at <http://my.sjsu.edu> (or other communication system as indicated by the instructor) to learn of any updates.

Zoom

I will be providing a Zoom link for each Live Online class at the beginning of the semester via Canvas. It is your responsibility to ensure your Zoom client is working and that you are able to attend class on time. While in class you are required to have your video camera on and your audio working. Again, please check Canvas often.

Course Description

This course focuses on security mechanisms for protecting information in computer systems and networks. This includes cryptography and its applications to security services in distributed systems, mathematics of

San José State University
School/Department
Computer Science 265: Cryptography and Computer Security, Fall 2022

cryptography, access control, protection models, security policies, design of secure systems, firewalls, and intrusion detection.

Course Learning Outcomes

Upon successful completion of this course, students will be knowledgeable of the major technical security challenges in each of the following four areas: cryptography, access control, protocols, and software. In addition, students will have advanced knowledge in cryptanalysis, endpoint defense and software reverse engineering, as evidenced by work on the major projects.

Required Texts/Readings

Textbook

Information Security: Principles and Practice, 3rd Edition, Mark Stamp

- Available via Amazon.com or Wiley.com
- Make sure it is the Third Edition as several major updates are in the 3rd Edition

Other Readings

- ***A Bug Hunter's Diary: A Guided Tour Through the Wilds of Software Security***, Tobias Klein, No Starch Press, 2011. Lots of interesting real-world examples of vulnerable code.
- ***Practical Malware Analysis: The Hands-On Guide to Dissecting Malicious Software***, Michael Sikorski and Andrew Honig, No Starch Press, 2012. An excellent book for information on reverse engineering (whether for malware analysis or other purposes). Includes many hands-on exercises.
- ***Software Reverse Engineering (SRE) website (<http://reversingproject.info/>)***. This website, which was created by a former masters student, includes lots of good information and detailed exercises with solutions.
- ***Network Security: Private Communication in a Public World***, second edition, Charlie Kaufman, Radia Perlman, and Mike Speciner, Prentice Hall, 2002, ISBN: 0-13-046019-2. This book provides good coverage of cryptography and excellent coverage of several security protocols.
- ***Security in Computing***, third edition, Charles P. Pfleeger and Shari Lawrence Pfleeger, Prentice Hall, 2003, ISBN: 0-13-035548-8. The strength of this book is its coverage of the security issues related to software. In particular, operating systems and some aspects of secure software engineering are covered well. This book also has some good, basic information on viruses.
- ***Applied Cryptography: Protocols, Algorithms and Source Code in C***, second edition, Bruce Schneier, John Wiley & Sons, Inc., 1995, ISBN: 0-471-11709-9. For better or for worse, in industry, this is the standard reference for all things cryptographic.
- ***Counter Hack Reloaded: A Step-by-Step Guide to Computer Attacks and Effective Defenses***, Ed Skoudis with Tom Liston, Prentice Hall, 2006, ISBN: 0-13-148104-5. There are many books that claim to provide information on how to foil hackers, but this is by far the best that I have seen. This is an updated version of the original Counter Hack, published in 2001.

**San José State University
School/Department**

Computer Science 265: Cryptography and Computer Security, Fall 2022

- **Computer Viruses and Malware**, John Aycock, Springer, 2006, ISBN: 0387302360. This book gives a good introduction to research topics related to malware. The book is well-written and surprisingly easy reading, given the technical nature of the material.

Course Requirements and Assignments

- **Lectures:** Students are strongly encouraged to attend all online live lectures. Any material presented in any lecture is testable information for the midterm and final exam. Quite a bit of material that is covered in class only will be necessary to successfully complete the projects, mid-term and final.
- **Homework:** There will be a total of 7 homework assignments due. Assignments are due no later than midnight the day they are due. **No late homework will be accepted for any reason.** Assigned problems require a solution and an explanation (or work) detailing how you arrived at your solution. Cite any outside sources used to solve a problem.
- **Projects:** Students are expected to complete two projects over the course of the semester. The Cryptology Project (Project #1) and Reverse Engineering Project (Project #2) information is provided in separate documents and posted to Canvas
- **Midterm Exam:** The midterm exam will be held on Oct 13th. The midterm will be in-class, closed-book, and comprehensive. Makeup midterm exams will only be given in cases of a verifiable emergency and at the discretion of the professor.
- **Final Exam:** The final exam will be held on Dec 7th from 5:15 PM – 7:30 PM. Makeup final exams will only be given in cases of a verifiable emergency and at the discretion of the professor.

Grading Information

In addition to the stipulations provided above, grading will be based on the following:

Assignments: 20%

Projects: 30%

Midterm: 20%

Final: 30%

Grading Scale:

Percentage	Grade
92 and above	A
90 - 91	A-
88 - 89	B+
82 - 87	B
80 - 81	B-
78 - 79	C+

San José State University
School/Department
Computer Science 265: Cryptography and Computer Security, Fall 2022

72 - 77	C
70 - 71	C-
68 - 69	D+
62 - 67	D
60 - 61	D-
59 and below	F

Classroom Protocol

- No extra credit is anticipated
- Wireless laptop is required. You will be informed when it is needed for a particular activity
- **Cheating will not be tolerated!**
- Student must be respectful of the teacher and other students
- No disruptive or annoying talking
- Turn off cell phones
- Class begins on time
- Class is not over until I say it's over
- A valid picture ID is required at all times

University Policies

Per University Policy S17-9, university-wide policy information relevant to all courses, such as academic integrity, accommodations, etc. will be available on Office of Graduate and Undergraduate Programs' [Syllabus Information web page](http://www.sjsu.edu/gup/syllabusinfo/) at <http://www.sjsu.edu/gup/syllabusinfo/>"

Course Schedule

This schedule is subject to change with fair notice. Notifications will be made via Canvas

Week	Date	Topics, Readings, Assignments, Deadlines
1	Aug 22	Introduction to the Course, Introduction to Cryptography and Data Security
1	Aug 24	Cryptology - Crypto Basics (READING: Chapter 1 - 2 - Stamp)
2	Aug 29	Cryptology – Symmetric Key Crypto. (READING: Chapter 3.3 - Stamp)

**San José State University
School/Department**

Computer Science 265: Cryptography and Computer Security, Fall 2022

Week	Date	Topics, Readings, Assignments, Deadlines
2	Aug 31	Cryptology - Advanced Encryption Standard (AES) <i>Cryptography Project Topic Due.</i> (READING: Chapter 3.3 – 3.5 - Stamp)
3	Sep 5	NO CLASS – Labor Day - Campus Closed - Campus Closed
3	Sep 7	Cryptology - Introduction to Public-Key Cryptography, RSA, Diffe-Heilman (READING: Chapter 4.1 – 4.4 - Stamp) <i>Cryptography Project Topic Due.</i>
4	Sep 12	Cryptology – Elliptical Curve Crypto (Video), Timed Assignment (READING: Up through Chapter 6 - Stamp)
4	Sep 14	Cryptology – Uses for Public-Key Cryptography. Public-Key Infrastructure (PKI) (READING: Chapter 4.6 – 4.9 - Stamp)
5	Sep 19	Cryptology – Hash Functions. Birthday Attack. Non-Crypto Hashing. Shamir’s Secret Sharing (READING: Chapter 5.1 – 5.8 - Stamp)
5	Sep 21	Cryptology – Visual Cryptography. Information Hiding. Steganography. Blockchain (Section Review) (READING: Chapter 5.9.1.2 – 5.10 - Stamp)
6	Sep 26	Cryptology Exam - Access Control - Passwords. (READING: Chapter 7.1 – 7.4 - Stamp)
6	Sep 28	Access Control – Authorization, Orange Book, EAL, Authentication vs Authorization, ACLs (READING: Chapter 8.1 – 8.6 - Stamp)
7	Oct 3	Access Control - Biometrics. Cookies. Single Sign On (SSO). Federated Access. (READING: Chapter 7.4 – 7.8 - Stamp)
7	Oct 5	Access Control – Multilevel Security Models, Bell-LaPadula. Compartments. Covert Channel (READING: Chapter 8.7 – 8.8 - Stamp)
8	Oct 10	Access Control - Inference Control, CAPTCHA. 2-Factor Authentication, Access Control Section Review. (READING: Chapter 9.1 – 9.2 - Stamp)
8	Oct 12	MIDTERM – Cryptology – Access Control (READING: Up through Chapter 9.2 - Stamp)
9	Oct 17	Protocols – Network Basics, Simple Protocols. Firewalls. Application Proxy. Intrusion Detection Systems, Anti-Virus v. Whitelisting. Anomaly Detection. Defense-in-Depth (READING: Chapter 8.9 – 8.11 - Stamp) (READING: Chapter 9.3 – 9.4 - Stamp)
9	Oct 19	Protocols - Authentication Protocols. Authentication and TCP (READING: Chapter 9.3 – 9.4 - Stamp)
10	Oct 24	Protocols – Real World Security Protocols: SSH. SSL. IPSEC, TLS (READING: Chapter 10.1 – 10.4 - Stamp)

**San José State University
School/Department**

Computer Science 265: Cryptography and Computer Security, Fall 2022

Week	Date	Topics, Readings, Assignments, Deadlines
10	Oct 26	Protocols – Real World Security Protocols: Kerberos. WEP, (Section Review) (READING: Chapter 10.5 - 10.6 - Stamp)
11	Oct 31	Software Security - Software Flaws (READING: Chapter 11.1 - Stamp)
11	Nov 2	Software Security - Reverse Engineering. Buffer Overflow. Stack Smashing Defense. Input Validation. Incomplete Mediation. Race Conditions (READING: Chapter 11.2 - Stamp)
12	Nov 7	Software Security – Malware. Worms, Trojans. Botnets. Ransomware, Real-World Attack Anatomy, Future of Malware, (READING: Chapter 11.3 – 11.5 - Stamp)
12	Nov 9	Malware detection, Integrity Monitoring, Digital Rights Management, Tamper Resistance, Secure Software Development (READING: Chapter 12 - Stamp)
13	Nov 14	Secure Software Development (Part 2), Trusted Computing Systems (READING: Chapter 12 - Stamp)
13	Nov 16	Software Security – Software Security – Static Application Security Testing (SAST), Dynamic Application Security Testing (DAST), Interactive Application Security Testing (IAST), Run-time Application Security Protection (RASP), Vulnerability Scanning, Penetration Testing
14	Nov 21	<i>Guest Lecture or Program Security</i> – Security Incident and Event Management (SIEM) Correlation, AI and Cybersecurity
14	Nov 23	NO CLASS – Non-Instructional Day – (NI)
15	Nov 28	Finals Review
15	Nov 30	<i>Reverse Engineering Project Presentations</i>
16	Dec 5	<i>Reverse Engineering Project Presentations</i>
Final Exam	Dec 7	5:15pm
